

# iOS Dev Accelerator

## Week 5 Day 5

- Linked Lists

# Linked Lists

- “In computer science, a linked list is a data structure consisting of a group of nodes which together represent a sequence”
- Each node is composed of a data and a reference to the next node in the sequence.

# What are linked lists used for?

- Many other data structures, like queues and stacks, are most efficient when they are backed by a linked list, instead of an array like we have done in class.
- They are also a classic interview question for developers.
